Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This 57S is part of a random genomic sequencing program of thirteen yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces exiguus, Saccharomyces servazzii, Zygosaccharomyces rouxii, Saccharomyces survazzii, Zygosaccharomyces rouxii, Saccharomyces fulyverii, Kluyveromyces pararianus var. marxianus, Pichia angusta, Debaryomyces hansenii var. marxianus, Pichia angusta, Debaryomyces hansenii var. hansenii, Pichia sorbitophila, Candida tropicalis and Yarrowia libolyfica. Genomic inserts of 3 to 5 kb were prepared and both extremities were sequence of the other extremity of this sequence and for the sequence of the other extremity of this insert.

T NOTE: This is a "working draft, sequence. It currently

* Consists of 5 contigs. Gaps between the contigs

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

* TS997 138071: contig of f2175 bp in length

* 75997 138071: contig of f2175 bp in length

* 138072 13899: contig of 19728 bp in length

* 158000 157999: gap of unknown length

* 158000 166058: contig of 19728 bp in length

```
The present sequence encodes a Candida albicans transcription factor, designated CATFILIA. The polypeptide is a DNA-binding protein, which is fivolved in initiating transcription of the ribosomal RNA SS gene. The polymuclectide is used to screen for its specific inhibitors, potentially useful as antimycotic agents, to raise an antibody response that is

The invention relates to constructing (M1) a strain of diploid fungal cells in which both alleles of a gene are modified, comprising modifying one allele by insertion or replacement by a cassette having an expressible selectable marker and modifying other allele by recombination, of a promoter replacement fragment with a hererologous promoter. So that expression of the second allele is regulated by the promoter. (M1) is useful for constructing a strain of diploid fungal cells in which both alleles of a gene are modified. The diploid fungal cells in whing both alleles modified are useful for identifying a gene that is essential to the survival or growth of a fungus, a gene that contributes to the virulence and/or pathogenicity of a fungus, a gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Constructing strains for identifying gene products as effective targets for therapeutic intervention, by inactivating in the strain one allele of a gene and placing other allele of the gene under conditional expression.

agent, an antifungal agent that inhibits the growth of a diploid fungus and for identifying a therapeutic agent for treatment of a mammalian disease. (M.) is useful for identifying a compound which modulates the activity of a gene product, preferably enzymatic activity, carbon compound catabolism, biosynthetic, transporter, transcriptional, translational, signal transduction, DNA replication and cell division activity. The method is useful for identifying a compound having the ability to inhibit growth or proliferation of C albicans cells and for treating infection by C albicans. The present sequence is that of an essential Candida albicans gene used in the method of the invention. Note: The sequence data for this patent is not represented in the printed the contraction by C. Albicans contraction of the invention.

                                                                                                                                                                                                                                            Gabs
              The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55110) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.

The invention describes a novel human isolated mucleic acid-associated polypeptide (NAAP). The polypeptides and polymucleotides are useful in diagnosing, treating and preventing diseases or conditions associated with the decreased expression or overexpression of NAAP, such as cell proliferative (e.g. cancer, atherosclerosis), neurological (e.g. AlDS, epilepsy, Huntington's disease, stroke), immune/inflammactry (e.g. AlDS, allexyfes) and developmental (e.g. Hypothyroidism, Cushing's syndrome) disorders, or infections. These are also useful in assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of MAAP. The NAAP or its fragments are useful in screening compounds for effectiveness as agonist or antagonist of the polypeptide, or in altering the expression of the target polymucleotide and compounds that specifically bind to or modulate the activity of the polypeptide. The microarray is useful in monitoring or measuring protein-protein interactions, drug-target interactions, and gene expression profiles. This sequence encodes a novel human nucleic acid-associated protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ςi

The invention relates to a combination which, comprises a number of polymucleotide probes comprising a sequence selected from one of the 1490 sequences mentioned in the specification. The combination is useful as an array element in a microarray for monitoring the expression of a number of target polymucleotides. The microarray is particularly useful in the diagnosis and treatment of cancer and immunopathology and neuropathology. The microarray is useful in diagnostics and treatment regimens, drug discovery and development, toxicological and carcinogenicity studies, monitoring progression of diseases and for developing sophisticated profiles for the effects of currently available therapeutic drugs. The

combination is also useful for purifying a subpopulation of mRNAs, cDNAs and genomic fragments and in research and diagnostic applications. The array can detect changes in expression in a large number of genes coding for different signaling pathway populations which can be used to diagnose various diseases including cancer e.g. adenocarcinoma and leukaemia, immunopathies e.g. AIDS and asthma, neuropathies e.g. Alzheimer's disease and Parkinson's disease. The present sequence represents a polynucleotide probe of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (FCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal cativity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular waight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving abbarrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. Aps64197-AAS94564 represent novel human diagnostic coding sequences. Aps64197-AAS94564 represent novel human diagnostic patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at (II) but was obtained in the way New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forenaics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity. New nucleic acid-associated proteins and polynucleotides, useful for diagnosing, treating or preventing cell proliferative (e.g. cancer), nearrological (e.g. epilepsy or Parkinson's disease), or autoimmune disorders (e.g. AIDS).

Claim 12; Page 292-293; 312pp; English.

The invention comprises the amino acid and coding sequences of human nucleic acid-associated proteins (NAAP). The DNA and protein sequences of the invention are useful for diagnosing, treating or preventing disorders associated with aberrant expression of NAAP, such as: cell proliferative disorders (e.g. arteriosclerosis, atherosclerosis, cirrhosis, hepatitis

New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity.

Claim 1; SEQ ID NO 390; 103pp; English.

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PKT) primers, oligomers, and for chomosome and gene mapping, and in recombinant production of (II). The polymuclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal crivity of (II) or to traat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a useful for generating antibodies against it, detecting or quantitating collapseptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymuclectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and anno acid sequences. AAS64197 AAS64454 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this electronic format directly from WIPO at the printed specification, but was obtained in electronic format directly from WIPO at the fire of sequences.

New polynuclectides and polypeptides, useful for developing a diagnostic marker or medicines for regulation of their expression and activity, or as targets of gene therapy.

Claim 1; Page; 222pp; English

The invention discloses a polynuclectide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel polypeptides. Also claimed is a polypeptide encode by the polynuclectide, a matibody binding to the polypeptide or peptide or the polynuclectide, immunologically assaying the polypeptide or peptide of the polynuclectide by contacting the polypeptide or peptide with the antibody of the encoded protein, and observing the binding between the two, a transformant carrying the polynuclectide in an expressible manner and an antisense polynuclectide. The oligonuclectide is useful as a primer for synthesising the polynuclectide, or as a probe for detecting the polynuclectide. The polynuclectide and encoded is useful as parimer for synthesising the polynuclectide, or as a probe for detecting the polynuclectide. The polynuclectide and encoded as defined in them, for developing a disgnostic marker or medicines for regulation of their expression and activity, or as targets of genes may be included in them, for developing a disgnostic marker or medicines for regulation of their expression and activity, or as targets of genes may be used as indicators for diseases (e.g. osteoporosis, transcription-related proteins, disease-related proteins, and genes encoding them can be used as indicators for diseases (e.g. osteoporosis, neurological diseases, cancer, tunours. The cDNA may be used to regulate the activity or expression of the invention. Note: some of the sequence content is a cDNA of the invention. Note: some of the sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the European Patent Office.

```
The invention discloses a polymucleotide comprising a sequence selected from 1970 fully defined nucleotide sequences which encoded novel colypoptides. Also claimed is a polypoptide encoded by the polymucleotide, an antibody binding to the polypoptide or peptide or its partial peptide, an antibody binding to the polypoptide or peptide or the polymucleotide, immunologically assaying the polypoptide or peptide or peptide by contexting the polypoptide or peptide with the antibody of the encoded protein, and observing the binding between the two, a transformant carrying the polymucleotide in an expressible manner and an antisense polymucleotide. The oligonucleotide is useful as a primer for synthesishing the polymucleotide, or as a probe of contecting are useful as pharmaceutical agents and encoded proteins are useful as pharmaceutical agents and many disease-related proteins are useful as pharmaceutical agents and many disease-related configuration of their expression and activity, or as targets or genes are involved in tissue and/or call configuration. Membrane proteins, aignal transduction-related proteins, contending them can be used as indicators for diseases (e.g. osteoporosis, convolvity or expression of the encoded proteins and genes are convolved in tissue content of seases, cancer, tumours. The cDNA may be used to regulate the activity or expression of the encoded protein to treat diseases. The convolvity or expression of the encoded protein to treat diseases. The sequence presented is a cDNA of the invention. Note: Some of the sequence of sease of the protein or the printed specification, but is based on sequence information supplied by the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polynucleotides and polypeptides, useful for developing a diagnostic

                                                                                                                                                                                                                                           The invention relates to a novel human macroprotein-45.76, the encoding polynucleotide, an antagonist and a method of recombinant production. The protein of the invention may be useful for treating dementia, arrhythmia, asthma and diabetes. The current sequence is that of the human macroprotein-45.76 cDNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               712 GIGGCAAATCATTTIGCAIGCTTICACAATIAACTCAACAIAAGAAATTCAIACIAGAG 771

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               246
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              423
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           126
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           186
                                                                                                                                                                                                                           New human nucleic acid associated proteins (NAAP), useful for diagnosing, treating and preventing diseases or conditions associated with the aberrant NAAP expression e.g. cancer, AIDS, atherosclerosis, epilepsy, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to human nucleic acid associated proteins (NAAP) and their corresponding nucleic acid sequences. The invention is useful in diagnosing, treating and preventing diseases or conditions associated with the decreased expression or overexpression of NAAP, such as cell proliferative (e.g. cancer, atherosclerosis), neurological (e.g. proliferative (e.g. cancer, atherosclerosis), neurological (e.g. allosympless), and developmental (e.g. Hypothyroidism, Cubhing's syndrome) disorders, or infections. It is also useful in assessing the effects of syngences or infections. It fragments are useful in screening compounds for which acts as their agonist or anteagonist. The microarray compounds for which acts as their agonist or anteagonist. The microarray target interactions, and gene expression profiles. NAAP DNA is used in gene therapy. The present sequence is human NAAP CDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 99

The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to novel human secretory or membrane proteins (ADA54071) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.

(HYSE-) HYSEQ INC.

The invention relates to 971 novel human cDNA sequences (ADC29919-ADC1989) and the polypeptides they encode (ADC30890-ADC1980). The invention also relates to mucleic acid sequences over 99% identical with invention also relates to mucleic acid sequences over 99% identical with invention also relates to mucleic acid sequences over 99% identical with convention and host cells comprising a mucleic acid of the invention; the vectors and host cells polypeptide of the invention; an antibody acid against a polypeptide of the invention; an antibody identifying a compound which binds to a polypeptide of the invention. The identifying a compound which binds to a polypeptide of the invention. The invention further discloses methods of peventing, treating or ameliorating a medical condition; kits comprising polymucleotide probes and/or monoclonal antibodies for carrying out the methods of the invention methods for the identification of compounds that mediate the and/or monoclonal antibodies for carrying out the methods of the invention are conting sequences corresponding to the compounds that mediate the expression or activity of the polymelication of compounds of the invention are conting sequences corresponding to the compounds of the invention are useful in diagnostics, drug screening, fornesics, gene mapping, in the identification of mutations responsable for genetic disorders or other identification of mutations responsable for genetic disorders or other disease and other neurodegenerative disease, and other neurodegenerative disease, and other neurodegenerative diseases, anaemia, platelet disease becomes and other neurodegenerative disease, and other neurodegenerative disease, and other neurodegenerative disease, and other neurodegenerative disease, and other neurodegenerative disease, and other neurodegenerative disease, and other neurodegenerative disease, and other neurodegenerative disease, and other neurodegenerative disease, and other neurodegenerative disease, and other neurodegenerative disease, and other neu New polynucleotide and polypeptide useful for diagnosing, preventing or treating conditions such as neurodegenerative diseases, anemias, platelet disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or ö 7 Wang > Asundi Claim 1; SEQ ID NO 844; 1185pp; English. **,** Wang D, Ma Drmanac RT; 2003-371981/35 Zhou P, Ghosh M, Haley-Vicente D, P-PSDB; ADC31733 WPI;

This GSS is part of a random genomic sequencing program of thirteen yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces

exiguus, Saccharomyces servazzii, Zygosaccharomyces rouxii, Saccharomyces Kluyveromyces themotolerans, Kluyveromyces lactis var. lactis, Kluyveromyces marxianus var. marxianus, Pichia angusta, Debaryomyces hansenii var. hansenii, Pichia sorbitophila, Candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to 5 kb were prepared and both extremities were sequenced. See keywords for description of this sequence and for the sequence of the other extremity of this insert.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          270
